Using JSon Server

Complément cours

Install Json-server :

npm install json-server

Run Json-server to watch a file

Json-server –watch file-path (or npx json-server ….)

Fetch data

Fetch('endPointUrl').then(response => response.json()).then(data => var = data).catch(err => console.log(err)).

Add new ressource

```
fetch(endPointURI, {
            method: 'POST',
            headers: {'Content-Type': 'application/json'},
            body:JSON_Object
        })
```

Update ressource

```
fetch(endPointUri, {
            method: 'PATCH',
            headers: {'Content-Type' : 'application/json'},
            body: JSON_Object
        })
```

Delete ressource

```
fetch(endPointURI, {method: 'DELETE'})
            .then(this.$emit('delete', this.project.id)) // we
            .catch(err => console.log(err))
```
